In 2020, UiPath introduced what they call "The Modern Design Experience", which is a new way in which you identify, configure, and verify target UI elements. There are also some new activities and a new data scraping wizard.

In 2022, this was set to default when installing UiPath Studio.

In this course, we use "The Classic Design Experience" and you need to set UiPath to run in Classic mode to be able to follow along in the upcoming videos and building your robot. This is done by doing the following:

- Go to **Home** > **Settings** > **Design**, and disable the **Use Modern for new projects** toggle.

As a person knowing both experiences well, I personally prefer the Classic one as I find it to be more flexible and suitable for more advanced processes; and therefore I also recommend it to aspiring RPA developers. However, the differences between the experiences are marginal so it is not a problem learning/using both!

If you want to read more about the differences between the two, please check out the URL that I have added as an external resource to this lesson below :)
