RPA – Pros

Pros of RPA

24/7 Operations
Non-stop performance

Cost Reduction
Costs 1/10 of a human employee

Internal Control and traceability
Every step is logged which offers traceability and also makes data available for analytical purposes

Improved efficiency
3-15x more efficient than a human employee

Scalability
Capacity can be increased – without a long and costly build-up phase

Quality
Increase quality by avoiding human errors and focusing on exceptions

Short Payback Period
RPA implementation costs are typically paid off in less than 12 months

Valuable Work
We can focus on more rewarding and value-adding activities
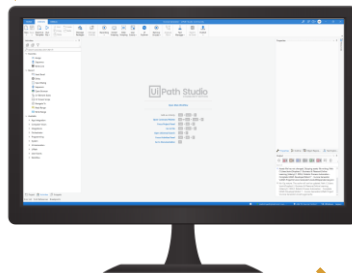

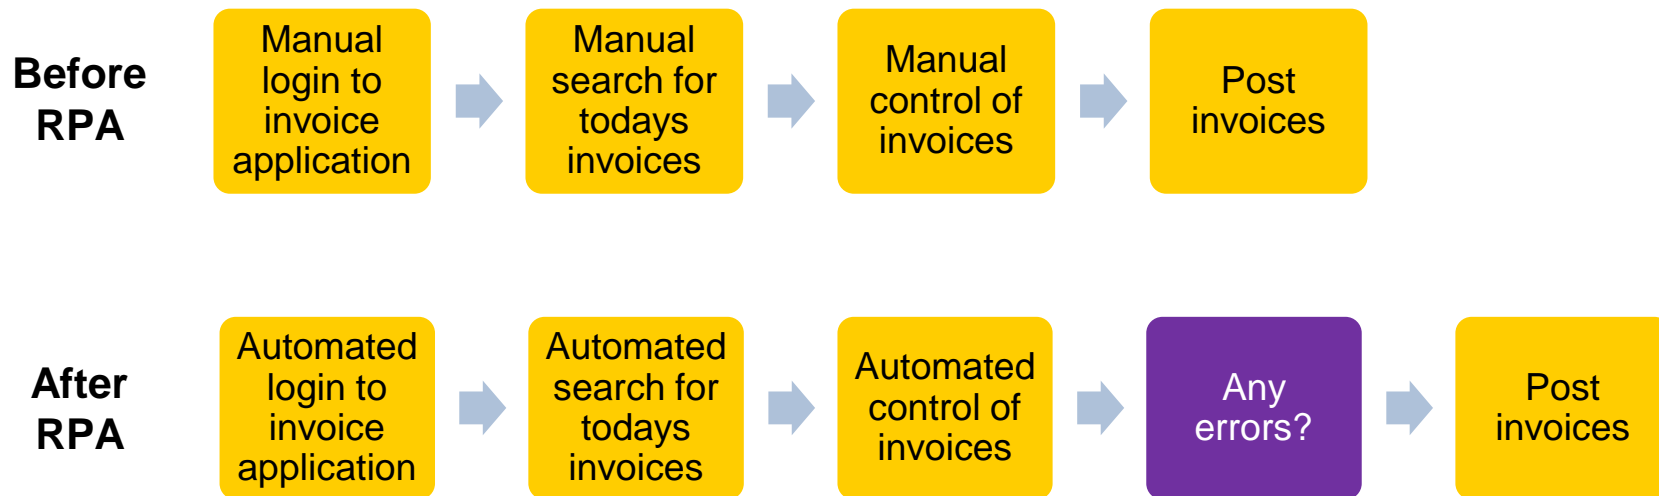

Example process

Before RPA

Manual login to invoice application → Manual search for todays invoices → Manual control of invoices → Post invoices

After RPA

Automated login to invoice application → Automated search for todays invoices → Automated control of invoices → Any errors? → Post invoices

Example process

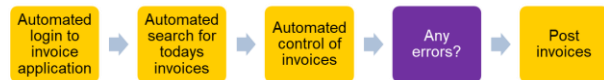

AVG time spent each invoice: **2 minutes**
AVG no of invoices per day: **1100**
AVG time spent all invoices/day: **2200 min (36,5 hrs)**

AVG time spent each invoice **20 seconds**
AVG no of invoices per day: **1100**
AVG time spent all invoices/day: **367 min (6 hrs)**
